ACTIVITIES FOR SLOW LEARNERS

Activities for Slow learners:

- The institute has a system to communicate performance and attendance of students to parents regularly. A set of 15 students are assigned to a faculty as mentor and personal and academic care of the student is taken care of by the corresponding mentor.(Mentor → Mentor Observer→Batch Incharge→Principal)
- The institution conduct special classes after the college hours by the course faculty especially for the slow learners and interacts with each student to get clarify the doubts in a better manner and will provide learning material , question banks and conducts slip tests also.
- The institution conduct remedial classes then provide course notes for students especially the slow learners and those students who are at the average of dropping out due to arrear subjects.
- A Bridge course is conducted by institution for newly admitted students before the commencement of first semester classes in Induction Programme. The main objective of the course is to bridge the gap between subjects studied at Pre-university level and subjects they would be studying in Graduation. The induction programme covers communication skills, universal human values and personality development sessions.

Roll No. : 22251T0001

1. Write a note on role of pharmacist in RDU of antibiotics, OTC and parentrals. [5M].

A Rational Drug use:-

→ It is defined as "Prescribing the right drug, in adequate dose for correct duration and to appropriate clinical needs of the patient to acheive safety and efficacy".

Role of pharmacist in Antibiotics:-

→ Antibiotics are widely used for the most of the diseases.

→ Over usage of antibiotics might cause resistant to the antibiotics and it might no longer be useful to the patient for using in critical conditions.

→ Pharmacist should have the knowledge about the antibiotics.

Role of pharmacist in OTC drugs:-

→ Advice by the phc family and friends

→ Incomplete prescription without any detailed description about the drugs and disease.

→ Stocked and stored in adequate amounts

→ Talk to the patient about signs and symptoms before dispensing specific drugs.

Role of pharmacist in Parentrals:-

→ Parentrals require a injection and a person who can be able to inject the parentral.

→ Parentrals have rapid onset of action, so only should be used only when required.

2. Write a note on EDC [5M]

A- Essential Drug Concept:-

The essential drug are those drugs that are having proven safety and efficacy ; available in adequate doses ; easily accessable , stored ; meets all the standard guidelines; available for lowest cost.

* These essential drugs are combinely listed in Essential Medication List.

History of Essential Medication list :-

→ The first nation to introduce the Essential Medication list is Tanzania in the year 1970.

→ Later in 1975 the World Health Assembly suggested to prioritise the EML to WHO and the other nations.

→ In 1996, India published its first National Essential Medication List [NEML] and contained only few medicines. [261 medicines]

→ In 2003, almost after 8 years the EML is upgrade updated and contained 364 medicines in the EML.

→ In 2011, the Supreme Court ordered to Update the EML since the EML has to be updated every 2years / when required. In this update upgrade the essential medications consisted of 328 medicines.

→ In 2018, the list has been upgraded and recently in 2022.

Advantages of EML:-

* Easy to access to the essential medication, cost effective drug control, Storage, adequate doses.
* The prescriber is easy to

Disadvantages of EML :-

* Creation of monopolies.
* lack of intrest in new innova-tions.
* Lack of freedom of choice.

PharmaCotherapeutics-I Angina Pectoris

1. Explain the role of nitrates in management of Angina Pectoris

Ans) The nitrates are the primary medication in case of angina pectoris. They act on the veins and cause ~~vasoconstriction~~ venodilation.

There are two types of nitrates → Short acting Nitrates
→ Long acting Nitrate

Short acting Nitrates include NTG (Nitroglycerides)

Fluorometry: Introduction

* Luminescence spectroscopy: Luminescence is emission of light by a substance. It occurs when an electron returns to the electronic ground state from an excited state & loses its excess energy as a photon.

* the emission of radiation from a species after that species has absorbed radiation. In luminescence, light produced at low temperatures, therefore the light produced by this process is regarded as "light without heat or cold light."

* Types of Luminescence:

1) Fluorescence: when a beam of light is incident on certain substances, they emit visible light (or) radiations. this phenomenon of fluorescence is instantaneous & starts immediately after the absorption of light & stops as soon as the incident light is cut off.

2) phosphorescence: when light radiation is incident on certain substances, they emit light continously even after the incident light is cut off. this type of delayed fluorescente is called phosphorescence.

3) chemiluminescence: The excitation energy is obtained from the chemical energy of reaction.

4) Bioluminescence: chemiluminescence from biological system. firefly, sea pansy, jelly fish, bacteria, Pholo20a

5) Triboluminescence: A release of energy when certain crystals, such as sugars are broken.

6) cathodoluminescence: A release of energy produced by exposu of cathode rays.

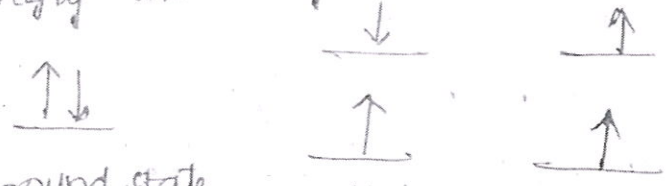

7) thermoluminescence:

Theory of Fluorimetry

* A molecular electronic state in which all of the electrons are paired are called singlet state.
* In a singlete state molecules are diamagnetic.
* most of the molecules in their ground state are paired.
* when such a molecule absorbs uv/visible radiation, one (or) more of the paired electron raised to an excited singlete state / excited triplet state.
* The electron spin in the excited state achieved by absorption of radiation may either be parallel (or) Antiparallel. Accordingly this may be a triplet (parallel) or a singlet (Antiparallel) state.

Ground state S_0 — Excited Singlet state, S_1 — Excited triplet state, T_1

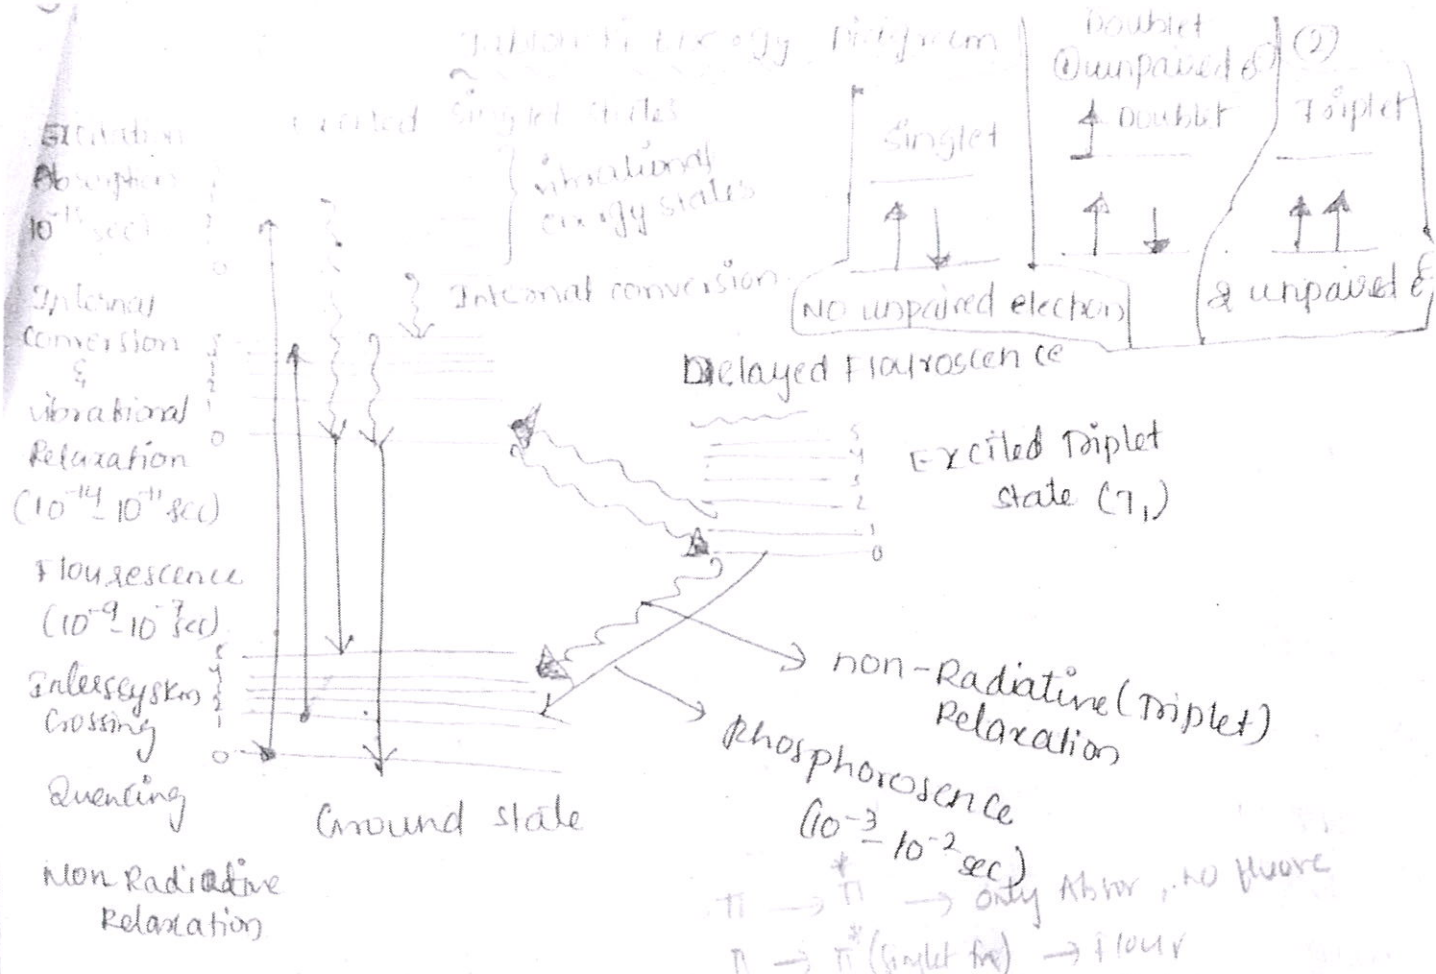

there are, possible electronic spin states of the molecules.

* When excited electrons absorb the radiant energy the bonding electrons get down to anti-bonding orbital. It is an instantaneous process having high energy but less stable. A molecular electronic state in which all the electrons are paired, known as singlet state & in this state molecules are know as Diamagnetic.
* In the ground state, most of the molecules are paired & when they absorb uv they raised to an excited singlet state.

singlet and Triplet states:-

* If there are 'n' number of unpaired electrons, it means that (n+1) fold degeneracy (equal energy states) will be associated with the electron spin, regardless of the molecular orbital occupied.

* Thus, if no unpaired electrons are present (n=0), there is only n+1 (or) 0+1 or 1 spin state, such state is called electron as singlet state.

* Similarly, systems having 1, 2, 3, 4, unpaired electrons refer to doublet, triplet, quarter etc..., states respectively.

* Most of the molecules in their ground state do not have unpaired electrons (singlet state).

* When such a molecules absorbs ultraviolet (or) visible radiation of the proper frequency, one or more of the paired electrons (generally a π electron) get

* In this excited state, the spin of the electron does not undergo any change & the net spin is still zero.
* one more possibility is that one set of electron spin may have undergone, unpairing, resulting in two unpaired electrons which an excited triplet state.

Excited state processes in molecules:-

* when the molecules are irradiated with light of the appropriate frequency, it will be absorbed in about 10^{-15} sec. In this process of absorption, the molecules may move from the ground to the 1st excited single electronic state. Although at room temperature molecules may be present in their ground vibration level, after absorption the excitational molecules can end up in any one of the vibrational levels in the first excited electronic state. From the excited singlet state, one of the following 3 phenomena will probably occur, depending on the molecule involved & the conditions:-

(a) The first possibility is that the excited singlet state is relatively unstable. In such a situation, the excited molecules will return to the ground state by collisional deactivation without emitting any radiation.

(b) The second possibility is that the molecule in the excited singlet state may emit an uncon visible light photon. this process is known as fluorescence. if we compare the absorption & fluorescence spectrum of the same compound, they do not superimpose on each

Atomic absorption spectroscopy

* Atomic absorption spectroscopy has proved itself to be most powerful instrumental technique for the quantitative determination of trace metals in liquids. This method provides a total metal content of the sample is almost independent of the molecular form of the metal in the liquid.
* By this technique, the determination can be made in the presence of many other elements. It means that it becomes unnecessary to separate the trace element from the other elements present in the sample & thus it saves a great deal of time & in the process eliminates several sources of error.
* As an analytical technique, it has become increasingly important bec of its high sensitivity & the comparative ease with which quantitative results can be obtained.

Disadv:- the method is that only one element can be determined at a time. A change in light source & a change of analytical are necessary to determine the second element.

Principle

* The absorption of energy by ground state atoms in the gaseous state forms the atomic absorption spectroscopy.
* When a solution containing metallic species is introduced into a flame, the vapour of metallic species will be obtained. Some of the metal atoms may be raised to an energy level sufficiently high to emit the characteristic radiation of the metal — a phenomenon that is utilized in the familiar technique of emission flame photometry.

But a large % of the metal atoms will remain in the non-emitting ground state.

Some metal atom → Emission

large % will remain ground state

*these ground state atoms of a particular element are receptive of light radiation of their own specific resonance λ. Thus, when a light of this λ is allowed to pass through a flame having atoms of the metallic species, part of that light will be absorbed & the absorption will be proportional to density of the atoms in the flame.

*thus in atomic absorption spectroscopy, one determines the amount of light absorbed. once this value of absorption is known, the concentration of the metallic element can be known bec the absorption is directly proportional to the density of the atoms in the flame.

mathematically the total amount of light absorbed

At ν the total amount of light absorbed = $\frac{\pi e^2}{mc} Nf$

where e is the charge on the electron of mass m, c the eq. c speed of light, N - the total no. of atoms that can absorb at frequency, v is the light path & f the oscillator strength (or) ability each atom to absorb at frequency ν.

as π, e, m & c are constants, eqn can be written as

Total amount of high absorbed = constant × N × f

* from the above eqn it is found that

(i) firstly, there is no term involving the λ (or ν) of absorption other than the indication of the actual absorption λ.

(ii) secondly there is no term involving the temperature.

From the above, it follows that absorption by atom is independent of the λ of absorption & the temperature of the atoms. these @ features provide atomic absorption spectro distinct advtges over flame emission spectroscopy.

*Although the temperature does not affect the process of absorption by atoms, it does affect the efficiency with which atoms are produced from a sample & ∴ indirectly affects the signal quite significantly.

Further more, some atoms, particularly those of the alkali metals easily ionize at high temperatures. Ions do not absorb at atomic absorption λ's. Alkali atoms that become ionized are effectively removed from the absorbing population, resulting in a loss of signal.

Differences b/w atomic absorption spectroscopy (AAS) & Flame Emission spectroscopy (FES)

Atomic absorption spectroscopy (AAS)	Flame Emission spectroscopy (FES)
① In atomic absorp spectroscopy, the reading obtained from the diff b/w the intensity of the source in the absence of metallic elements presents in the liquid & the decreased intensity for obtained when metallic ato elements are present in the optical path.	① In this, the atoms when put in a flame, become excited. the excited atoms which is unstable, quickly emits a photon of light & returns to a lower energy state, eventually reaching the unexcited state. the measurement of this emitted radiation forms the basis of FES. Analytical signal in Flame emission is the sum of all energies emitted as excited atoms drop to the ground state. the signal comes entirely from the emitting atoms.
② The atomic absorption depends on upon the no. of unexcited atoms & the absorption intensity does not depend upon the temperature of flame density	② In this, the emission intensity is dependent upon the no. of exciting atoms & is, ∴ greatly influenced by temp variations.
③ In this, the relation b/w absorbance & conc^n is nearly linear, that is, Beer's law is obey over a wide conc^n range.	③ this is not present in flame emission spectroscopy.

Advantages of atomic absorption over Flame Emission Spectroscopy

① This technique is specific bcz the atoms of a particular element can only absorb radiation of their own characteristic λ, the converse is also true i.e. the light of a particular frequency can easily be absorbed by the specific element to which it is characteristic. sp spectral int ↓ rarely

spectral interference which occurs in flame emission spectroscopy : occur rarely in AAS.

spectra interf ↑

② the large no. of metal atoms that contribute to an Atomic absorption signal, variation in flame temperatures show relatively less effect in atomic absorption spectroscopy than Flame emission spectroscopy in which the smaller no. of atoms are producing an emission signal. In short, it means that atomic absorption spectroscopy is independent of flame temp.

③ In terms of detection limits atomic absorption & Flame emission are quite similar i.e., some elements posses lower detection limits by flame emission & others by atomic absorption.

more sensitive by flame emission	About equally sensitive	more sensitive by atomic absorption
Al	Cr	Ag
Ba	Cu	As
Cd	Mn	Au
Eu	Mo	B
Ho	Pd	Si
In	Rb	Cd
K	Sr	Fe
La	V	

Disadvantages of Atomic absorption spectroscopy are:

* A separate lamp for each element to be determined is required. An attempt is being made these days to overcome this difficulty by using a continous source i.e. a very high resolution monochromator or alternatively to produce a line source by introducing a flame.
* In aqueous solutions, the predominant anion affects the signal to a negotiable degree.
* This technique cannot be used very successfully for estimation of elements like Al, Ti, W, Mo, Si etc., because these elements give rise to oxides in the flame. However, the estimation can be carried out under modified conditions.

Gel chromatography

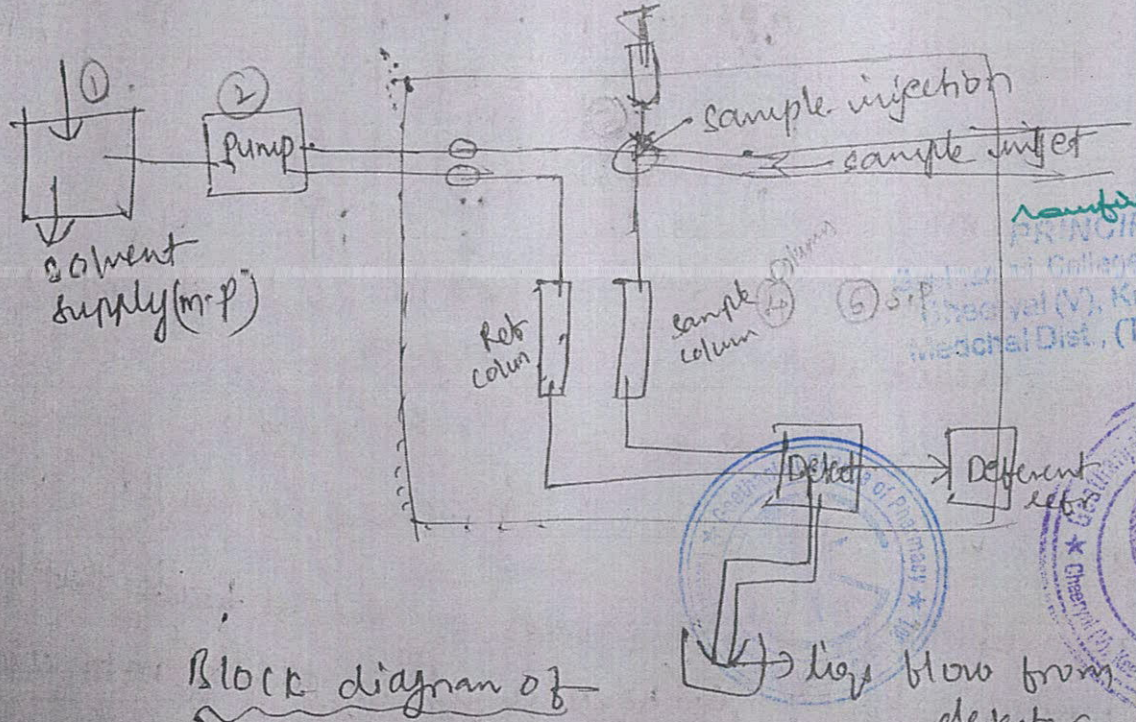

Introduction:- Gel filtration means filtering of the molecules. IEC - molecules separated based on charge. But in gel filtration, the separation is based on the size of the molecule

* GPC is also called as Gel filtration, molecular sieve Gel permeation chromatography filtration & size exclusion chromatography.

* GPC uses a porous material as the S.P & M.P - liquid. solid

* Gel chromatography is a simple & reliable method for separating molecules according to the size.

* It is generally applicable to the purification of all classes of biological substances including giant molecules that are not readily fractionated by other technique. Good separations & high activity yields are easily obtained.

by selecting small sampling direction τ.

Principle & Theory:-

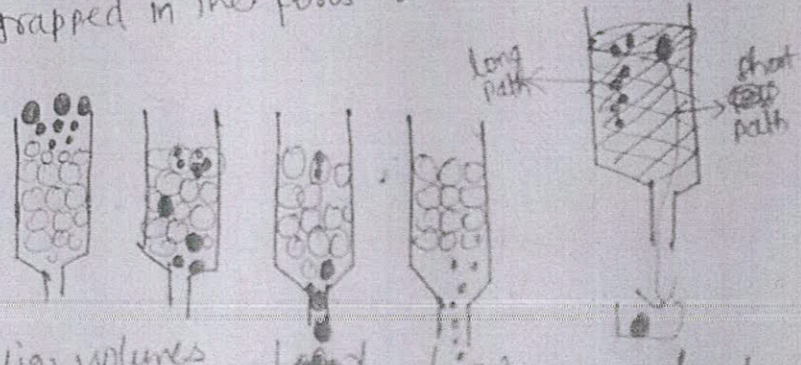

Principle & Theory:- The S.P - Agarose (polymer bec it creates (solid) cellulose network like structure)

* m.p is liq, different types of m.p are available but, the choice depends on the sample components used for separation.

* similar to electrophoresis, but the difference is there we create the voltage circuit (current flow) their, But here no need to apply electrical circuit, it is based on gravitational force.

Principle:-

* Loaded the column with S.P - agarose, Now introduce the sample mixture which has different sized molecules. Large molecules can't passes through the pores, but it passes along blank spaces that are present, only small molecules enter the pores, and they will take large path to travel, so they come late; whereas the large molecules take short path, so they will travel fast, as they are not trapped in the pores of the gel.

* In simple explanation:- If column is constructed as in the bead form & Contains two measurable liq volumes such as internal & external volume:

Internal volume :- vol consists of the liq in the bead

External volume :- vol consists of

* In gel chromatography, S.P consists of porous beads that have a relatively narrow size range when packed into column & when m.p is allowed to pass through the column, then

the small sized particles are trapped in the beads, whereas large sized particles are not trapped by the beads, they take short path & travel faster. whereas small sized particles takes longer path are travels late.

* The theory of gel chromatography is based on the total volume, Inner volume, void volume, elution volume & gel volume.
* External volume is usually refered as void volume V_o, which is the volume of the eluent outside the gel matrix. this vol required to elute the large molecule which cannot pass through the pores.
* Inner volume: vol of eluent inside the gel matrix / beads, (V_i)
* The $V_t = V_o + V_i + V_g$ → vol of dry gel
* For a given type of gel, the distribution coefficient, K_d of a particular solute b/w the Inner & outer solvent is a function of its molecular size. If the solute is large & completely excluded from the solvent in the gel, $K_d = 0$, whereas if the solute is sufficiently small to gain accessibility to the inner solvent, $K_d = 1$. Due to.
* Due to variation in pore size for a given gel, there is some inner solvent which will be available, & some which will not be available to solutes of intermediate size, hence K_d values vary b/w 0-1.
* It is this the complete variation in K_d b/w these 2 limits which makes possible separation of solutes in narrow molecular size range on a given gel.
* (V_e), elution volume of given solute depends on

$$V_e = V_o + K_d V_i$$

Scanned with CamScanner

$\therefore V_t = V_0 + V_i \Rightarrow V_0 = V_t - V_i$

* V_i is calculated from the known dry wt of the gel or water regain value, W_r

$V_i = \alpha W_r$ (α → dry wt of gel, W_r → water regain value)

$V_e = V_0 + K_{av}(V_t - V_0)$

* V_e depends on the size of the column, K_d is aindependent of the geometry of the gel bed.

$$K_d = \frac{\text{molar conc}^n \text{ of Analyte in S.P}}{\text{molar conc}^n \text{ of Analyte in M.P}}$$

$$K_{av} = \frac{\text{molecules absorbed in S.P}}{\text{molecules absorbed in M.P}}$$

* For 2 substances of different mol. wt k_d values are k_d', k_d'', effluent volume V_s

$$V_s = (V_0 + K_d' V_i) \times (V_0 + K_d'' V_i).$$

⇒ TLG :- Thin layer gel filtration is also possible it is common to TLC, but some imp distinctions. In TLG a layer of swollen gel is spread onto a glass plate.

* TLG is not dried as TLC, TLG plate is placed in an airtight container & connected to reservoirs at either end by means of the filter paper bridges. The plate is inclined at 20° to the horizontal, thus facilitating transport of M.P through the layer.

* equilibrium is done for a minimum of 12 hrs. to normalise the ratio b/w S.P & M.P volumes.

* The sample is applied as spots/band & plate developed for a suitable period. The separated spots are detected by appropriate method.

* TLG - adv is - no. of samples can be chromatographed at the same time under identical conditions, & small amount of samples are required in clinical analysis.

HISTORICAL BACKGROUND AND DEVELOPMENT OF PROFESSION OF PHARMACY

Pharmacy

►Pharmacy is a science and technique of preparing as well as dispensing of drugs and medicines.

►It is a health profession that links health sciences with chemical sciences and aims to ensure the safe and effective use of pharmaceutical drugs.

►The scope of pharmacy practice includes traditional roles such as compounding and dispensing medications and it also includes more modern services related to health care including clinical services, reviewing medications for safety and efficacy and providing drug information.

►Pharmacists are the experts on drug therapy and are the primary health professionals who optimize use of medication for the benefit of the patients.

►The word *pharmacy* is derived from its root word *Pharma* which was a term used since the 15th–17th centuries.

►The original Greek roots from *pharmakos* imply sorcery or even poison.

►In addition to pharma responsibilities, the pharma offered general medical advice and a range of services that are now performed solely by other specialist practitioners such as surgery and midwifery.

►The pharma (as it was referred to) often operated through a retail shop which, in addition to ingredients for medicines, sold tobacco and patent medicines.

► The Greek word *pharmakeia* derives from *pharmakon* meaning "drug", "medicine" (or "poison").

►In its investigation of herbal and chemical ingredients, the work of the pharma may be regarded as a precursor of the modern sciences of chemistry and pharmacology, prior to the formulation

Pharmaceutics

►Is the discipline of pharmacy that deals with the process of turning a new chemical entity (NCE) or old drugs into a medication to be used safely and effectively by patients.
►It is also called the science of dosage form design.
►There are many chemicals with pharmacological properties, but need special measures to help them achieve therapeutically relevant amounts at their sites of action.
►Pharmaceutics helps relate the formulation of drugs to their delivery and disposition in the body.

►Pharmaceutics deals with the formulation of a pure drug substance into a dosage form. Branches of pharmaceutics include:

- Pharmaceutical formulation
- Pharmaceutical manufacturing
- Dispensing pharmacy
- Pharmaceutical technology
- Physical pharmacy
- Pharmaceutical jurisprudence

HISTORY OF PHARMACY

►The pharmacy profession can be traced back at least as far as the Sumerian population, living in modern day Iraq.

►From around 4000 BC, they used medicinal plants such as liquorice, mustard, myrrh and opium.

►There were separate people who worked to prepare medicines, as a separate role from diagnosis and treatment which was carried out by medics.

►These precursors to pharmacists also combined their role with that of a priest.

►The Sumerians wrote the earliest surviving prescriptions from at least 2700 B.C.(so nearly 5000 years ago).

►The Ancient Egyptians had specific preparers of medicine, known as *Pastophor.*

►Pharmacy was viewed as a high status branch of medicine, and again, like the Sumerians, these pharmacists were also priests who worked and practised in the temples.

►From surviving papyrus scrolls, notably the Ebers Papyrus which dates from 1500 BC, we know that the Egyptians made and used infusions, ointments, lozenges, suppositories, lotions, enemas and pills.

►The Ebers Papyrus includes 875 prescriptions and 700 drugs.

►Meanwhile, in China in about the same era (2000 BC), a man called Shen Nung wrote the first *Pen T'sao* or native herbal, which contained descriptions of 365 plant-based drugs.

►Stalls and shops selling medicinal goods existed around 1900 B.C. in the town of Sippara on the Euphrates river. However, the earliest recorded shop dealing with sales of medicines in London was opened in 1345.

►The word 'pharmacist' was first used in a publication in England in 1834.

►At the beginning of the 19th century most people working in this area would have called themselves chemists and druggists.

►The terms pharmacist and pharmaceutical chemist (now usually shortened to chemist) came later in the 1800s.

►The word "pharmacy" has a much longer history in England.

►Chaucer in *The Knight's Tale* (written around 1386) uses the word to describe a medical preparation of plants "farmacies of herbs."

►The term apothecary, often used between the 1600s and 1800s, does not refer to the chemist and druggist, or pharmacist.

PRINCIPAL

►It was used for individuals living in London who had passed the examinations of the Worshipful Society of Apothecaries of London, founded in 1617, or to their often less well qualified counterparts in the provinces.

►The role of apothecary developed out of the role of Spicer or Pepperer or grocers, someone whose trade included crude drugs and prepared medicines.

►The Grocers had their own Guild – professional body in the City of London- from the 13the century.

►The Apothecaries split from them in 1617 to form their own Society.Although the apothecary's practice included a strong dispensing element.

►Apothecaries were also examining and treating patients, but they did not charge for these services – only for the medicines supplied.

►Following a ruling in the Rose Case (1701-1703), apothecaries became legally ratified members of the medical profession, able to prescribe as well as dispense medicines.

►As apothecaries moved into a more advisory role, pharmacists (or chemists and druggists) could develop their own area of preparation and supply of medicines. However, this put them in competition with the apothecaries who were also still involved in the same area.

►The apothecaries attempted to control the chemists and druggists' activities in 1748 with a proposed new law to control the supply of medicines.

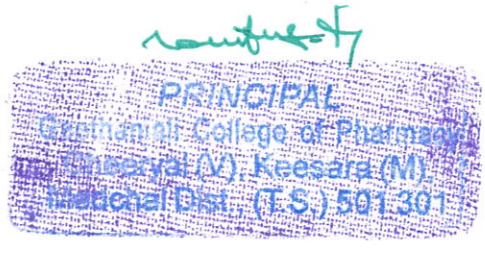

►In the early 1800s, an Association was formed to put together a proposal to Parliament to set up a body that examined and regulated apothecaries, surgeon-apothecaries, midwives and dispensing chemists.

►The chemists and druggists took action, arguing that they were best placed to set their own standards, as they had more experience in making up prescriptions and making medicines than the apothecaries, so they should not be put under their control.

►The chemists and druggists won their argument when the Apothecaries Act of 1815 was finally created, the apothecaries did not have control over making medicines.

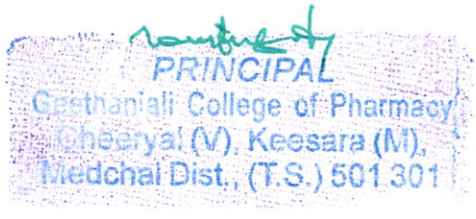

SOME KEY DATES IN PHARMACY HISTORY

YEAR	EVENTS
1820	The alkaloid quinine was first extracted from the bark of cinchona trees by two French chemists, Pierre Joseph Pelletier and Joseph Biename Caventou.
1874	Diamorphine or Heroin was first synthesised from morphine.
1883	First edition of *The Extra Pharmacopoeia* published, edited by William Martindale and Dr Wynn Westcott.
1899	Aspirin, was launched by the German company.
1910	Salvarsan, the first 'magic bullet' drug, effective against syphilis was discovered by Paul Ehrlich and Dr Sahachiro Hata.
1915	Medicine stamp duty was doubled as a wartime fundraiser.
1917	The Venereal Disease Act prohibited the advertising of medicines for VD and selling mixtures containing scheduled substances. It introduced the concept of 'prescription only' medicines.
1922	The Dangerous Drugs Act regulated the import and sale of potential 'drugs of addiction', including the derivatives of opium, cocaine and cannabis so widely used in proprietary remedies.
1928	Penicillin discovered by Alexander Fleming.
1938	The Food and Drugs Act prohibited the adulteration and mislabeling of drugs.
1939	The Cancer Act restricted the advertisement of products claiming to treat cancer.
1940	Under the Finance (No. 2) Act purchase tax was imposed on a range of goods including most drugs and medicines.
1941	The Pharmacy and Medicines Act repealed the old medicine stamp duty. It forbade the general advertisement of products claiming to treat a number of specific illnesses including Bright's disease, cataract epilepsy and TB, or to be effective in procuring an abortion. For the first time manufacturers were required to list the active ingredients of products on their packaging.
1948	The National Health Service made prescription medicine available to all. Until the introduction, in the 1950s, and subsequent hefty increasing of prescription charges, proprietary medicines were no longer seen as a cheap alternative to seeing the doctor.
1961	Ibuprofen was first synthesised by a team at the Boots Pure Drug Company in December.
1964	Introduction of Adverse Drug Reaction 'yellow card' scheme in reponse to the thalidomide tragedy of 1961.

Note: i) Question paper consists of Part A, Part B.
ii) Part A is compulsory, which carries 25 marks. In Part A, answer all questions.
iii) In Part B, Answer any one question from each unit. Each question carries 10 marks and may have a, b as sub questions.

PART- A

(25 Marks)

1.a) Name some properties that make nano materials unique. [2]
b) Name the different types of nanoparticles with example. [3]
c) Name some polymers used for preparation of polymeric nanoparticles. [2]
d) What are Niosomes? Give examples. [3]
e) Define Nano-thernostics. [2]
f) Difference between active and passive targeting using nanoparticles. [3]
g) What are the nanomaterials used in pulmonary drug delivery system? [2]
h) Mention three main advantages of nanoparticles in cardiovascular drug delivery? [3]
i) What is the formula for calculating drug entrapment and drug loading for nanoparticles? [2]
j) What is zeta potential? Explain the importance of it. [3]

PART - B

(50 Marks)

2. Discuss the history of introduction of nanoparticles as a drug delivery vector in drug delivery technology. [10]

OR

3.a) What are the most important properties of nanoparticles?
b) Explain the effect of change of particle size in mechanical and optical properties of nanoparticles [5+5]

4.a) Briefly explain about super para-magnetism in nanoparticles.
b) Write briefly on magnetic features of Nanoparticles. [3+7]

OR

5.a) Discuss in detail about the characterization of polymeric nanoparticles.
b) Discuss the major drawbacks of polymeric nanoparticles in drug delivery and targeting? [5+5]

6. How has nanotechnology helped to improve medical treatment and diagnosis? Explain in details. [10]

OR

7.a) Why are nanoparticles used for drug targeting?
b) Explain how nanoparticles target cells. [5+5]

8.a) What are the major factors and function in intranasal drug delivery?
b) Discuss the role of nanoparticles in intra-nansal drug delivery? [5+5]

PART- A (25 Marks)

1.a) Define cosmetic as per D&C Act. [2]
b) List the classes of drugs which can be imported with license. [3]
c) Highlight the importance of Schedule M and N. [2]
d) What is the role of government analyst? [3]
e) Differentiate between state and joint state pharmacy council. [2]
f) Give the functions of consultative committee. [3]
g) What are the objectives of NPPA? [2]
h) Define advertisements. Give the classes of the exempted advertisements. [3]
i) What are the objectives of Mudaliar committee? [2]
j) Enlist different types of intellectual properties. [3]

PART-B (50 Marks)

2. Define the following as per D&C Act:
a) Import
b) Manufacturing License
c) Loan License
d) Inspector
e) Schedule O. [2+2+2+2+2]

OR

3. Discuss the conditions of the grant of license for manufacture of a new drug. [10]

4. Discuss in detail the labelling requirements for drugs and cosmetics. What are the list of the colors permitted for use in drugs and cosmetic products? [10]

OR

5. Discuss the role of
a) Drug Inspector
b) Licensing authorities. [5+5]

6. Discuss in detail the process of registration of a pharmacist. [10]

OR

7. Discuss the constitution and function of Narcotic and Psychotropic Consultative Committee. [10]

PART – A

(25 Marks)

1.a) Write the structure and use of DDT? [2]
b) Define electrophiles? Give two examples for electrophiles. [3]
c) Give the structure and uses of m-cresol and ß-napthol [2]
d) Give qualitative test of phenol. [3]
e) What are fatty acids? Give an example for saturated fatty Acids. [2]
f) What do mean by Reichert Meissl (RM) value? Give its significance. [3]
g) Give the nitration reaction of naphthalene. [2]
h) Give the nitration reaction of anthracene. [3]
i) Give addition reactions of cyclopropanes. [2]
j) Write wurtz`s synthesis of cycloalkane. [3]

PART – B

(50 Marks)

2.a) What is Electrophilic aromatic substitution reaction? Discuss the mechanism of Nitration of benzene.
b) Explain the mechanism of halogenation of benzene. [5+5]

OR

3.a) Explain the orientation effect of Hydroxyl and amino group in benzene.
b) Define activating and deactivating groups with examples. Discuss the Mechanism of sulphonation of benzene. [5+5]

4.a) What are phenols? Give any three methods of preparation of phenol.
b) Write a note on acidity of phenol. [5+5]

OR

5.a) Write any three methods of preparation of aromatic amines.
b) Give synthetic uses of aryl diazonium salts. [5+5]

6.a) Enlist analytical constants of oils and fats. Discuss in detail about acid value.
b) Define Ester value. Give the principle involved in the determination of Estervalue. [5+5]

INDUCTION PROGRAMME- A.Y 2023-2024

(27-09-2023 to 06-10-2023)

ORGANIZED BY DEPARTMENT OF PHARMACOLOGY& PHARMACY PRACTICE

The induction programme was brought in with a view to uplift the level of the entrants to an elevated stage, promote all-round development and exposing learners' stigmas to minimize and to maximize their learning. Learners come with diverse thoughts, backgrounds & perceptions. Hence it becomes important to help them adjust to the new environment & inculcate the ethos of the institution with a sense of larger purpose. The Induction Programme – A.Y 2023-24, at Geethanjali college of Pharmacy was organized by DEPARTMENT OF PHARMACOLOGY & PHARMACY PRACTICE.

The program's goals are:

1. To introduce college's campus, its faculty, and the management's amenities.

2. To introduce the academic policies, curriculum, career counselling, and mentorship programme that our college has developed for B. Pharm, M. Pharm and Pharm D students.

3. To motivate the pupils by leading a lesson on Universal Human Values & Ethics to create Human Values & Ethics to uphold in the society for their prosperous future.

Induction Programme-2k23

Mathematics Diagnostic Test: 2K23, Time-1hr, Marks-20 **Date:** 29-9-23

Name of the student: P. Akhila

1. $A = \begin{bmatrix} 5 & 1 & 0 \\ 1 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix}$ What is the matrix A order? [C]

A) 4×4 B) 3×2 C) 3×3 D) 9×9

2. If $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$ $B = \begin{bmatrix} 5 & 6 \\ 0 & 8 \end{bmatrix}$, then $A + B$ =? [A]

A) $\begin{bmatrix} 6 & 8 \\ 3 & 12 \end{bmatrix}$ B) $\begin{bmatrix} -6 & -8 \\ 10 & 12 \end{bmatrix}$ C) $\begin{bmatrix} 6 & 8 \\ -10 & -12 \end{bmatrix}$ D) $\begin{bmatrix} -6 & 8 \\ 10 & -12 \end{bmatrix}$

3. If $A = \begin{bmatrix} 4 & 5 \\ 5 & 4 \end{bmatrix}$ then 3A is ? [B]

A) $\begin{bmatrix} 6 & 7 \\ 5 & 4 \end{bmatrix}$ B) $\begin{bmatrix} 12 & 15 \\ 15 & 20 \end{bmatrix}$ C) $\begin{bmatrix} -8 & -10 \\ -10 & -8 \end{bmatrix}$ D) $\begin{bmatrix} -6 & -7 \\ -5 & -4 \end{bmatrix}$

4. If $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$ $B = \begin{bmatrix} 5 & 6 \\ 7 & 8 \end{bmatrix}$, then $A + B$ =? [A]

A) $\begin{bmatrix} 6 & 8 \\ 10 & 12 \end{bmatrix}$ B) $\begin{bmatrix} -6 & -8 \\ 10 & 12 \end{bmatrix}$ C) $\begin{bmatrix} 6 & 8 \\ -10 & -12 \end{bmatrix}$ D) $\begin{bmatrix} -6 & 8 \\ 10 & -12 \end{bmatrix}$

5. Matrix A is a null matrix of order 3X3 then det(A)=? [A]

A) 0 B) 1 C) 2 D) 3

6. Evaluate the determinant of $\begin{vmatrix} 5 & 4 \\ 1 & 2 \end{vmatrix}$ [C]

A) 0 B) 1 C) 6 D) 3

7. What is the rule for matrix addition and subtraction? A&B
   A) The number of columns of the first matrix must equal the number of rows of the second matrix
   B) The matrices must have same dimensions
   C) The matrices must have same number of rows , but not columns
   D) There is no rule matrix addition and subtraction is always possible

8. What is the rule for matrix multiplication? [A]
   A) The no.of columns of the first matrix must equal the no.of rows of the second matrix
   B) The matrices must have same dimensions
   C) The matrices must have same number of rows , but not columns
   D) There is no rule matrix addition and subtraction is always possible

191

9. What is the trace of the matrix $A = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{bmatrix}$ [ ]

A) 15 B) 10 C) 9 D) 5

10. Which of the following matrix represents the transpose of the matrix $A = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{bmatrix}$ [B]

A) $\begin{bmatrix} 1 & 2 & 3 \\ 2 & 5 & 6 \\ 3 & 8 & 9 \end{bmatrix}$ B) $\begin{bmatrix} 1 & 4 & 7 \\ 2 & 5 & 8 \\ 3 & 6 & 9 \end{bmatrix}$ C) $\begin{bmatrix} 1 & 4 & 7 \\ 2 & 4 & 8 \\ 3 & 6 & 9 \end{bmatrix}$ D) $\begin{bmatrix} 1 & 4 & 7 \\ 2 & 5 & 8 \\ 3 & 6 & 6 \end{bmatrix}$

11. If det(A)=0, then A is called [C]

A) 0 B) Non- singular C) Singular D) Zero

12. A Square or rectangular array of numbers written within square brackets in a definite order in rows and columns is known as [C]

A) Formula B) Determinant C) Matrix D) Equation

13. Two matrices A and B added if [A]

A) Both have in same order B) Both are rectangular

C) Number of columns of A is equal to columns of B D) Number of rows of A is equal to rows of B

14. Two matrices A and B multiplied to get AB if [C]

A) Both have in same order

B) Both are rectangular

C) Number of columns of A is equal to number of rows of B

D) Number of rows of A is equal to rows of B

15. In Matrix Columns are denoted by [D]

A) A B) R C) R D) C

16. In Matrix Rows are denoted by [B & C]

A) A B) R C) R D) C

17. If matrix A is of order 2×3, then transpose of A is of order [D]

A) 2×3 B) 2×2 C) 3×3 D) 3×2

18. Transpose of column matrix is [A & D]

A) row matrix B) zero matrix C) diagonal matrix D) column matrix

19. Order of a matrix is [A]

A) $no.of\ rows \times no.of\ columns$

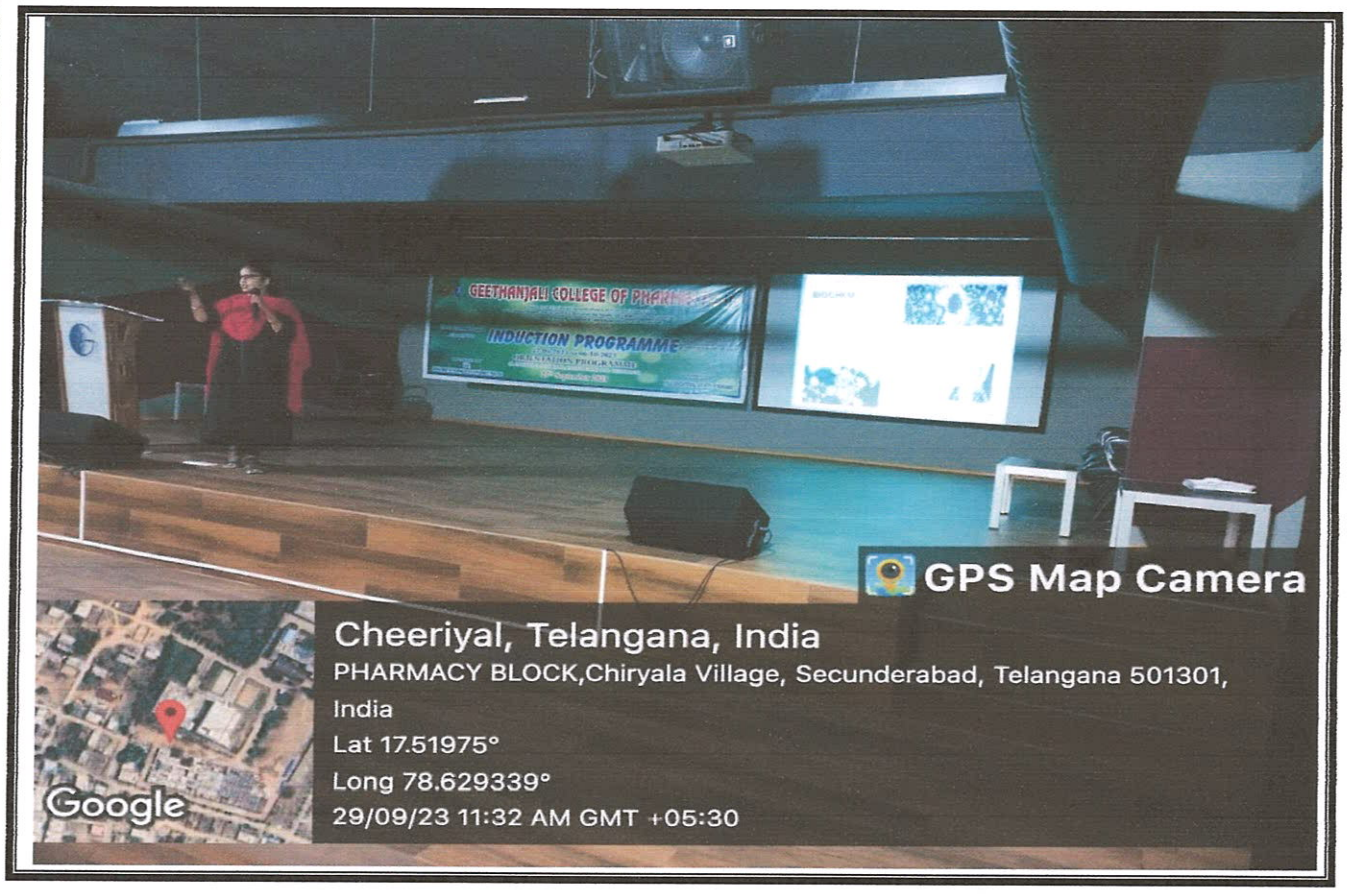

B) $no.of\ cloumns \times no.of\ rows$

C) $no.of\ cloumns/no.of\ rows$

D) $no.of\ rows/no.of\ columns$

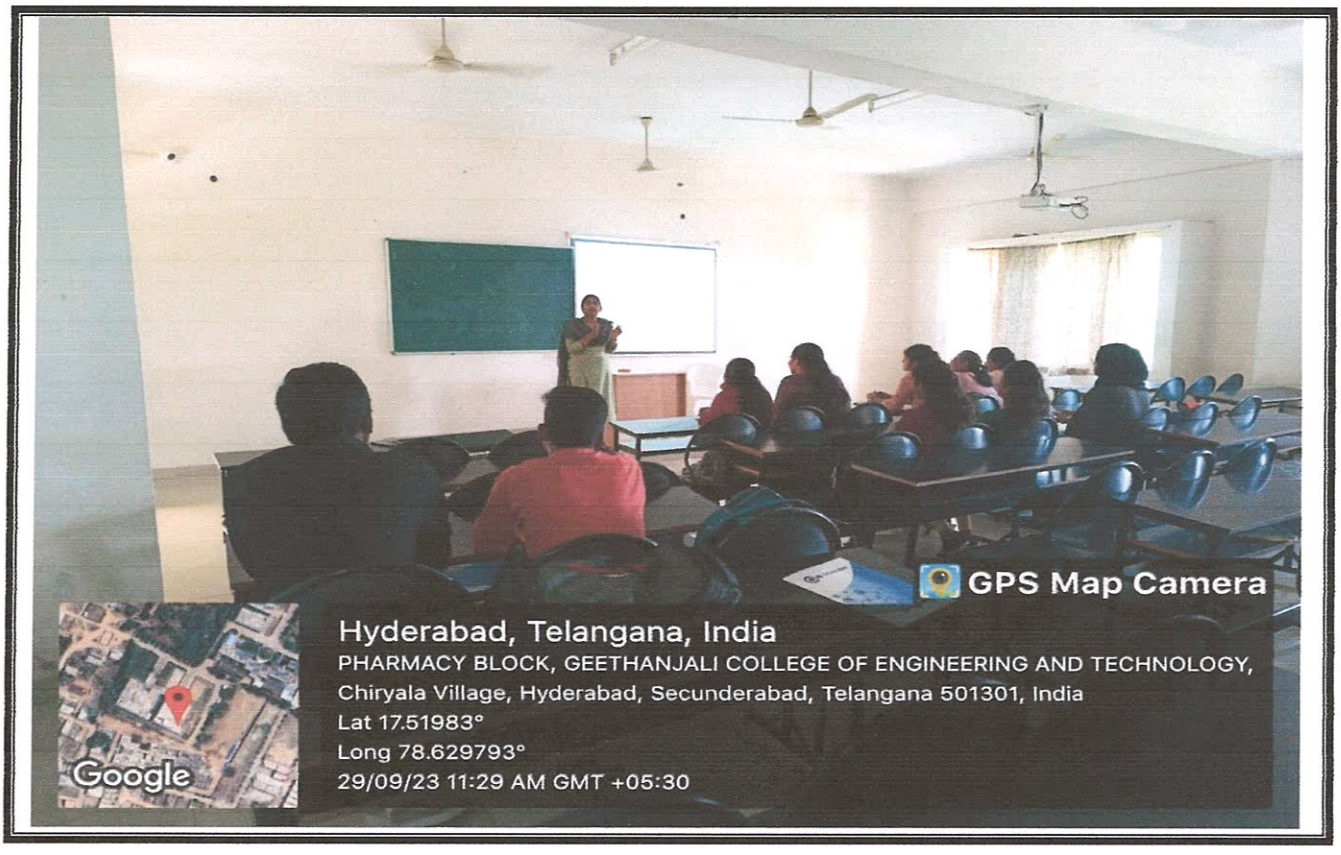

20. Identity Matrix of 2X2 is denoted by [B]

A) O B) I C) $L_{2\times2}$ D) $I_{2\times2}$

Diagnostic test on Pharmaceutical Chemistry

Name: _____

1. Which of the following is the simplest member of organic compounds?
   a) Formic acid b) Formaldehyde
   c) Methane d) Methanol

2. Hydrocarbons are organic compounds with the element _____
   a) Both hydrogen and carbon b) Carbon
   c) Hydrogen d) Oxygen

3. Which of the following bonds is made up of many organic compounds?
   a) Metallic bond b) Dipolar bond
   c) Ionic bond d) Covalent bond

4. Which of the following is a classification of Organic compounds?
   a) alicyclic compounds and acyclic compounds
   b) Cyclic compounds and alicyclic compounds
   c) Open chain compounds and acyclic compounds
   d) Open chain compounds and linear chain compounds

5. Which of the following is not a class of organic compounds?
   a) Amides b) Electro compounds
   c) Nitro compound d) Carbonyl compound

6. 8. Organic compounds can be classified even based upon function groups. Which of the following is not a functional group?
   a) Isocyano b) Carbonyl
   c) Isocyanide d) Carboxyl

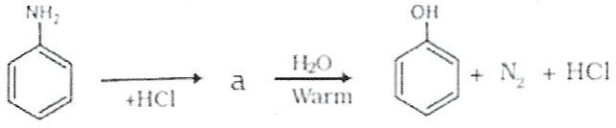

7. Which of the following does not come under the organic addition reaction?
   a) Halogenation b) Hydrohalogenation
   c) Hydration d) Dehydration

8. Which of the following is the general formula of Diazonium salt?
   a) $RN_2^+HSO^-_2$ b) $RN_2^+X^-$
   c) RN^+ d) RXI

9. Which of the following will be the product 'a' in the given reaction?

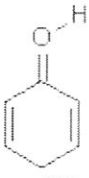

a) Chlorobenzene
b) Benzene
c) Benzene diazonium chloride
d) Enolate form

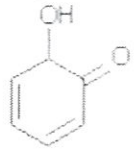

10. Which of the following is used to prepare Benzoyl chloride from benzoic acid?
a) Cl_2, H_2O
b) $SOCl_2$
c) SO_2, Cl_2
d) Cl_2, hv

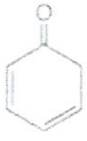

11. Which of the following compound is yielded from the reduction of nitroalkanes?
a) Amine
b) Acid
c) Diazo compounds
d) Alcohol

12. Which of the following is a tautomer of phenol?

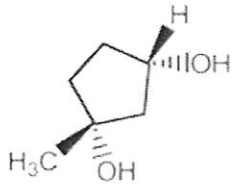

a) 

b) 

c) 

d) 

13. What is the complete IUPAC name of the following substance?

a) (1R,3S)-1-methylcyclopentane-1,3-diol
b) (1S,3R)-1-methylcyclopentane-1,3-diol
c) (1S,3S)-1-methylcyclopentane-1,3-diol
d) (1R,3R)-1-methylcyclopentane-1,3-diol

14. Which of the following is neither an acid nor base?
a) KCl
b) CH_3OH
c) HCl
d) CH_3COOH

15. Which is not present in Grignard reagent?
a) Methyl group
b) Magnesium
c) Halogen
d) −COOH group

The National Education Policy 2020, commonly referred to as NEP 2020, is a comprehensive framework for transforming the education system in India. This policy aims to bring about significant changes in all levels of education, from primary to higher education. One of the key highlights of NEP 2020 is the shift from a 10+2 education system to a 5+3+3+4 structure, catering to the developmental stages of children from the age of 3 to 18 years. This restructuring aims to provide a more holistic and skill-based approach to learning. Another notable aspect is the emphasis on multidisciplinary education, allowing students to choose subjects across streams and fostering a well-rounded development.

NEP 2020 also emphasizes the importance of early childhood education, as it is recognized as the foundation for lifelong learning. The policy envisions promoting critical thinking, creativity, and problem-solving skills among

168

students, rather than rote learning. Additionally, NEP 2020 aims to make education more inclusive and accessible, addressing issues related to gender, socio-economic disparities, and students with disabilities.

To align with the digital age, the policy promotes the integration of technology in education and encourages the use of digital resources for learning. Furthermore, NEP 2020 emphasizes the role of teachers as facilitators of learning and aims to provide them with adequate training and professional development opportunities.

In conclusion, the National Education Policy 2020 seeks to revolutionize the education landscape in India by focusing on flexibility, skill development, inclusivity, and holistic growth. By addressing the evolving needs of students and society, NEP 2020 aims to create a more robust and effective education system that prepares learners for the challenges of the 21st century.

1. What is the National Education Policy 2020?

2. What structural change does NEP 2020 propose for the education system?

3. How does NEP 2020 emphasize on multidisciplinary education?

4. How does NEP 2020 address issues related to inclusivity?

5. What are the main objectives of NEP 2020?

Internet has brought a major change in our lives ranging from smaller things to a greater extent. The term Digital India means a changeover brought by the internet including the things like Online transactions, Banking, Metropolitan cities, Digital way of teaching, advancement in the medicine and all the other sectors of lives where internet plays a crucial role. One should understand that being the part of the new India known as digital India made things easier and available for all. Once upon a time things like Internet, televisions, Banking, medical care, transportation were, quite expensive and were-affordable by only few. The new internet era has broke the barriers and is available for all irrespective of place they live, their age. A notable and remarkable point of Digital India is that it is helping the country growth and development way faster than it was that time. If the things remain undisturbed and used for a greater cause soon the word "developing country" will changed into "developed country".
